

- Fuels and Forest Restoration Workshop - From Theory to Practice: Landscape-Level Restoration Principles

Join us **Thursday, December 1** and **Friday, December 2** at
Lubrecht Experimental Forest

Objectives: Demonstrate and discuss methods for expanding project planning from stand- to landscape-based planning. Drawing from the recent publication, [Restoring fire-prone Inland Pacific landscapes: seven core principles](#), share examples from planning efforts in multi-jurisdictional, fire-prone, mixed-conifer forests in the Northern Rockies. Discuss, capture, and disseminate successes and challenges encountered during landscape-based project planning.

Target Audience: Land managers including line officers, planning team members, silviculturists, foresters, resource specialists, scientists, and informed partners to landscape-scale project planning.

Event Location: The **Lubrecht Experimental Forest** is a 28,000-acre, outdoor, dry mixed-conifer forest laboratory and classroom 30 miles northeast of Missoula, MT.

December 1 9:00 AM-4:00 PM. Light continental breakfast and lunch will be provided. Please plan to stay for dinner at Lubrecht!

December 2 8:00 AM-4:00 PM. Hot breakfast and lunch will be provided.

Lodging is available at Lubrecht Experimental Forest for Nov 30 and Dec 1.

Visit the [workshop website](#) to learn more about lodging, travel scholarships, registration, and more!
